CUSTOMER CONFIDENCE, BEFORE MERGE

TinyFish UX Guardian.

CodeRabbit reviews your code.
TinyFish reviews your user experience.

AI customers test every pull request before it ships.

Diff-aware | Preview vs. production | Evidence in your PR

The code passes.
The customer gets stuck.

01 / CODE REVIEW

A diff can’t click the login button.

“The login button no longer works on mobile.”

02 / E2E SUITES

Brittle scripts. Incomplete coverage.

Tests break on UI changes and miss journeys nobody scripted.

03 / AI QA TODAY

Outside the PR loop. No production baseline.

A failure alone can’t tell you what this PR broke.

Review what changed for the customer — before it reaches production.

Every PR. A customer verdict.

PR → 01 **Diff analyzer** LLM picks affected journeys. → 02 **TinyFish Fetch** Free pre-check of preview + prod. → 03 **Playwright** Desktop + mobile checks vs. prod. → 04 **TinyFish Agent** Desktop journeys like a real customer. → 05 **Judge** Confirms only real regressions.

Playwright checks and Agent journeys run in parallel against the same production baseline.

06 / ONE STICKY PR COMMENT

Repro · Severity · Screenshots · AI fix

Preview-only failure + deterministic proof or a confirming retry.

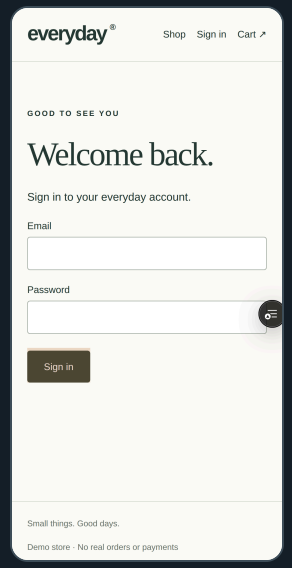

Two real regressions. Zero copy-change noise.

PR #1 P1

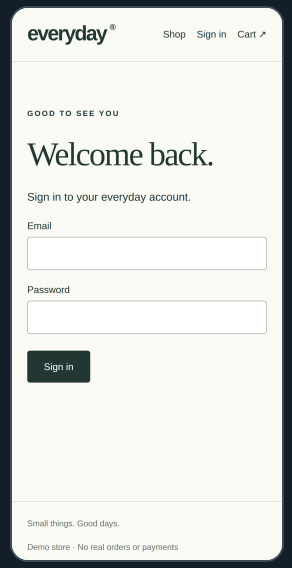

Mobile sign-in blocked

6 TinyFish agent journeys passed on desktop.
Playwright caught the mobile-only bug.

github.com/aranish-uk/ux-guardian/pull/1 ↗

PREVIEW / BLOCKED

PRODUCTION / WORKS

PR #2 P0

Cart route → 404

AI root cause
+ a verified patch.

github.com/aranish-uk/ux-guardian/pull/2 ↗

PR #3 0 FINDINGS

Harmless copy change

No regressions.
No noise.

github.com/aranish-uk/ux-guardian/pull/3 ↗

Open source plumbing. TinyFish intelligence.

A fork of **browser-use/vibetest-use**.
browser-use swapped for TinyFish in one adapter.

DEMO METRICS · AGENT COST VARIES WITH JOURNEY STEPS

From every pull request to every customer journey.

Install a GitHub App. Let AI customers do the checking.

Today: a working GitHub Action.
Next: zero config, continuous confidence.

Auto-discovered journeys

Start testing without writing a manifest.

Persona swarms

New user · accessibility · slow network

Production monitoring

Keep journeys healthy with TinyFish Monitor.

The ask: Try the demo. Star the repo. Pilot it on your next PR.

Here is the demo: Demo 1 (PR #1) · Demo 2 (PR #2) · Demo 3 (PR #3)
